

Continuous Hinges – FSC Series (Concealed)

When aesthetics are top of mind, the FSC Series Continuous Hinge delivers by providing a proprietary hanging method that conceals the hinge leaves, both on the door and frame, from view. The FSC Series is designed specifically for normally held-open applications and furthers Syntégra’s vision of deeper integration and creating extraordinary openings that are not burdened with hardware clutter.

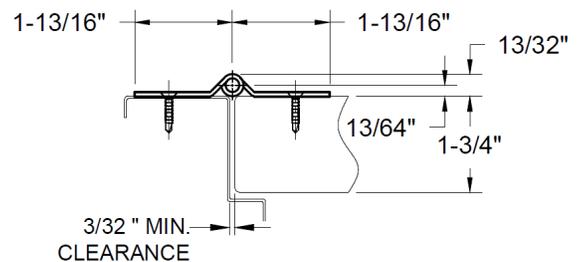

Syntégra hinges are precision-engineered to withstand the severities of the toughest environments while retaining their beauty throughout the life of the building. Syntégra continuous hinges evenly distribute the forces along the full length of the door which reduces stress on the frame, closer, and the locking system.

Syntégra stainless hinges come standard with proprietary ‘clean’ bearings that minimize static electricity which can attract dust and debris. These bearings significantly prolong the life of the hinge by eliminating metal-to-metal contact often found in lesser products.

Features

- Heavy-Duty 14ga. – 304 series stainless steel
- Field paintable
- 180° swing with minimized projection
- No exposed fasteners when door is open
- ‘Clean’ bearings standard
- Self-drilling screws supplied
- Welded end pins standard
- Supports door weights up to 600 lbs.
- US32D Satin Finish

Options

Standard

Hospital Tip
Security Fasteners (Torx-Pin)

Certifications

- Exceeds ANSI/BHMA A156.26 Grade 1 requirements
- Meets UL10C – U.L. and U.L.C. listed
- Meets ANSI/BHMA A117.1 and ADA for barrier-free access
